Length: 265mm

Running No.: 142

PLEASE NOTE THE MODELS PHOTOGRAPHED ARE PRODUCED FOR TEST PURPOSES ONLY

THE CALEDONIAN ...

Locomotive No. 123 was built in 1886 by Neilson & Co for the Caledonian Railway and was one of the locomotives that took part in The Race to the North in 1888. In the 1920's No.123 was used to pull the Directors' saloon but in 1930 it was returned to ordinary service and operated until 1935. By that time the locomotive had been painted in LMS colours and carried the number 14010. After being withdrawn from service the 4-2-2 wheeled locomotive was repainted in its original Caledonian livery and was numbered once more 123 and is now housed at the Glasgow Museum of Transport. The Hornby model was first introduced in 1963 and over the following years made several appearances both in the Caledonian Railway blue and later in LMS colours. The Hornby models final appearance was in 1983 when it carried the LMS colours.

This year sees the Caledonian Railway locomotive No.123 making a welcome return nearly 45 years after its first introduction. Where possible and to keep the integrity of the first Hornby model No. 123, the original body styling has been maintained, however the chassis and the motor have been upgraded to the level expected by today's modeller. Accompanying the Caledonian will be one brake and two composite coaches which were first produced by Hornby (then Tri-ang Railways) in 1962 and were last available in 1973! This specially packaged Limited Edition train pack will have a restricted production run of just 3000 pieces and each will included a numbered certificate.

Set Contents

Caledonian Railway 4-2-2 No. 123 locomotive, 2 Caledonian composite coaches & 1 Caledonian brake coach, Numbered Limited Edition certificate
